Reaction™ - your way to treat cellulite

Have you noticed that orange peel texture on your tummy, thighs, underarms and buttocks? You're not alone!

Cellulite occurs in more than 80% of women over the age of 20. Even average and underweight people have cellulite and the condition is usually triggered with the onset of puberty.

Reaction™ is designed to treat those stubborn cellulite marks at the core while strengthening existing collagen fibers, rendering a more toned and firmer appearance to your skin.

How long does the treatment take?

Each treatment session lasts approximately 20-30 minutes.*

How many sessions do I need?

A recommended treatment course consists of 4-8 sessions, depending on the skin type and physical characteristics.*

Will the cellulite disappear completely?

The treatments are effective and results are visible from the first treatment. Following completion of the treatment course, your aesthetician will be able to tailor suitable maintenance sessions to target your unique needs.

What does the treatment feel like?

The treatment is simple and comfortable and resembles a deep tissue massage combined with suctioning of the skin. Glycerin oil is applied on the treatment area allowing the applicator to easily travel along the skin in slow, concentrated rotations.

* Number of treatment sessions required, and final results, may vary per patient.

Is the treatment safe?

Yes. Reaction™ is a safe, effective and non-invasive treatment with no adverse effects involved.

How does it work?

Reaction™ combines two mechanisms of RF energy and vacuum therapy that work with the body's natural regeneration processes. Going deep under the skin, the RF energy targets enlarged fat pockets to reduce fat cell volume and increase the metabolism while the vacuum manipulation increases local blood circulation and lymphatic drainage.

Reaction™ - your path to rejuvenation

If you've looked closely in the mirror recently, you probably have seen the effects of time and nature.

Think you can't defy the laws of gravity?
Think again!

Reaction™'s breakthrough technology provides for improved blood circulation. An increased concentration of oxygen and nutrients revitalize your skin, resulting in a more rejuvenated, younger looker appearance.

What is the treatment?

The treatment incorporates Viora's revolutionary CORE™ technology involving RF energy. With time and age, our skin's elasticity decreases naturally. In addition, factors such as smoking and sun exposure effect our skin as well. Using bi-polar RF energy we can heat the dermis and stimulate increased blood circulation. With improved blood flow to the skin, there is a tangible and significant improvement in the skin, resulting in a smoother appearance.

What areas can be treated?

Treatments are suitable for facial treatments including the jowls, cheeks, brows and the sensitive zones of the forehead, as well as the neck, décolleté and underarms.

How long does the treatment take?

Each treatment session lasts approximately 15 minutes.*

Is it safe?

Yes, the treatment is safe, effective and has no adverse effects. The treatment involves a unique skin cooling mechanism along with an applied cooling gel for maximum comfort.

How many treatments must I have?

A treatment course of 3-5 sessions is recommended for optimal results.*
